Code Colosseum

Henock Dinberu, Rukudzo Mushunje, Aidan Sommer

Advisor: Giovanni Abuaitah

A Competitive Programming Environment

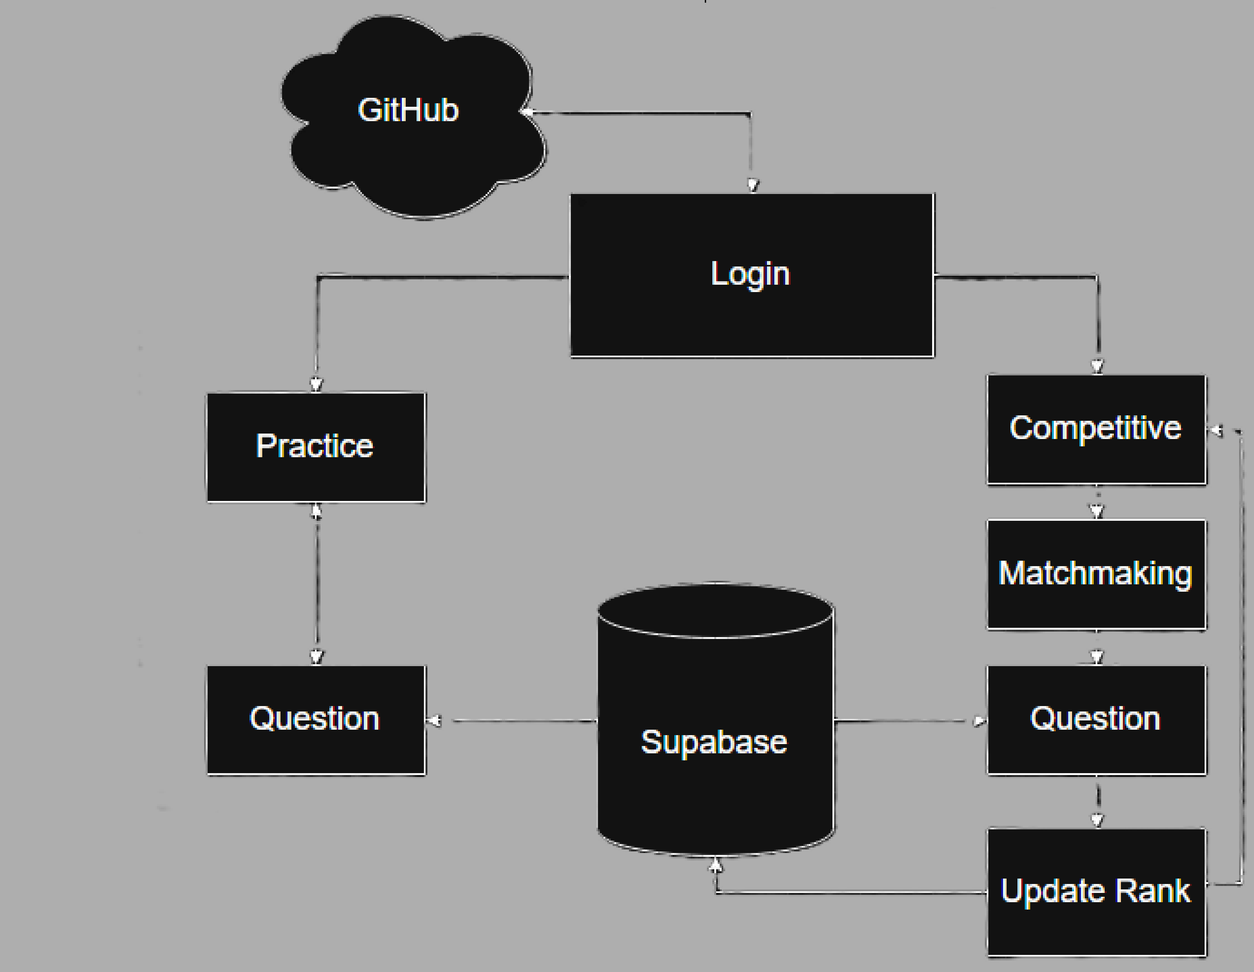

Code Colosseum is a competitive environment that allows people to compete against each other, like popular competitive web applications like chess.com. Users will be able to log onto the platform and be pitted against other users for rank points. There will be different game modes that offer different playing styles and challenges.

Achievements

- Realtime matchmaking
- Practice / competitive modes
- Containerized code execution
- Supports four programming languages
- User authentication via GitHub SSO

Challenges

- Structuring the real time web connections
- Reducing API user API requests
- User login and connecting friends
- UI/UX development

Technologies

supabase

docker

NEXT.JS

Monaco Editor

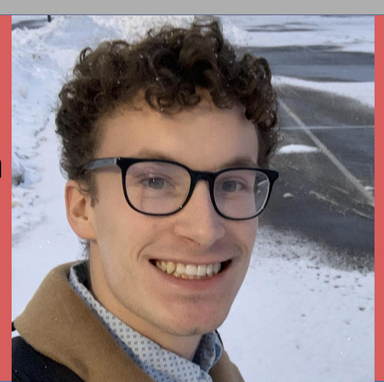

Tailwind CSS

Future Development

- Compete against AI
- Private invite only sessions
- Multiplayer modes
- Collaborative features:
  - Clan/Group feature
  - Message Board
- Game Modes
  - Expand on current game
